

ENVIRONMENTAL AND PRODUCT DATA SHEET

Product

PS Lids

Raw Material

Polystyrene (PS)

Packaging

Inner: PE

Outer: Corrugated board

Field Of Application

Based on the migration tests and Declaration of Compliance in Duni's possession, the lids can be used safely with all types of foodstuffs, serving cold and hot. The articles can be used for storage, hotfill and temperatures up to 2 hours at 70°C.

The lids are safe to use with all kinds of beverages up to hotfill conditions from a food contact perspective. However, it is not recommended to use them with very hot drinks because of deteriorating performance and stability as well as due to the risk of burn injuries.

The lids are not suitable to use in microwave oven.

EC Directive 94/62/EC on Packaging and Packaging Waste

The packaging complies with all essential requirements as defined by 94/62/EC.

For example minimum adequate amount of packaging, limitation of heavy metal content, recyclable through at least one of the following: reuse, material recovery, energy recovery or composting.

Environmental Aspects

Product

Polystyrene is made from crude oil (virgin plastic).

Packaging

PE is manufactured from crude oil.

The corrugated board is unbleached and to a large extent made from recycled fibres.

Product Safety

The products fulfill the following:

- EU Regulation 10/2011/EC with amendments
- EU Regulation 1935/2004/EC
- EU Regulation 2023/2006/EC
- Migration tests on the article material performed by an independent institute showed that under appropriate test conditions, overall and specific (when relevant) migration falls considerably below the limit given by regulation 10/2011. (For further details, see *Declaration of Compliance*).
- Duni manufacturing units are certified according to the international quality system ISO 9001. They have also implemented the environmental management system ISO 14001.

Management Of Used Products**Recycling**

The product may be recycled with plastic. However, recycling depends on collection, sorting and general material acceptance. Always consult with a local waste handler for recycling recommendations.

Recycling of the plastic- and the corrugated board packaging is possible for producing new products.

Energy Recovery

All the materials are suited for energy recovery. Complete combustion gives mainly rise to carbon dioxide and water. The energy content of plastics/paper is comparable to that of oil/ wood.

Validity

This is issued 2023-03-29. It is revised when there is a change in the manufacturing process, in the product or in legislation.
