

ENVIRONMENTAL AND PRODUCT DATA SHEET

Product

PE-laminated paper cup, soup bowl, wok box and lid

Material

Paper board PE-lamination
Flexo Print water-based

Packaging

Inner: PE
Outer: Carton

Field Of Application

The product can be used for hotfill and temperatures up to 70°C for 2 hours.

The cups, bowls and booxes are not suitable for alcoholic food with higher alcoholic content than 5 % due to functional properties.

The article is not suitable to use in a microwave oven.

EC Directive 94/62/EC on Packaging and Packaging Waste

The packaging complies with all essential requirements as defined by 94/62/EC.
For example minimum adequate amount of packaging, limitation of heavy metal content, recyclable through at least one of the following: reuse, material recovery, energy recovery or composting.

Environmental Aspects**Product**

The cups are manufactured from virgin pulp which origins from renewable sources. The lamination is made from PE originating from fossil sources.

PFAS (per- and polyfluoroalkyl substances) are not being used in any step of the manufacturing of the product.

Packaging

PE is manufactured from mineral oil or natural gas. The polymer consists simply of carbon and hydrogen.

The corrugated board is unbleached and to a large extent made from recycled fibres.

Product Safety

The products fulfil the following:

- EU Regulation 10/2011/EC with amendments
- EU Regulation 1935/2004/EC
- EU Regulation 2023/2006/EC
- The paper board fulfils the German recommendation BfR XXXVI.
- Migration tests on the article material performed by an independent institute showed that under appropriate test conditions, overall and specific (when relevant) migration falls considerably below the limit given by regulation 10/2011. (For further details, see *Declaration of Compliance*).
- Duni manufacturing units are certified according to the international quality system ISO 9001. They have also implemented the environmental management system ISO 14001.

Management Of Used Products**Recycling**

The product may be recycled with cardboard and paper materials. However, recycling depends on collection, sorting and general material acceptance. Always consult with a local waste handler for recycling recommendations.

Recycling of the plastic and the corrugated board is possible for producing new products.

Energy Recovery

All the materials are suited for energy recovery. Incineration of mixed waste for energy recovery is a good end-use of products. Paper and plastic may burn well with low emissions.

Incineration facilities for energy recovery are dependent on local infrastructure. Incineration for energy recovery is a good alternative when material recovery is not available by recycling.

Validity

This is issued 2023-05-23. It is revised when there is a change in the manufacturing process, in the product or in legislation.
