

ENVIRONMENTAL AND PRODUCT INFORMATION SHEET

Product

Wooden cutlery (for cutlery packs a napkin is included)

Material

Cutlery: Waxed birch wood (Carnauba wax E903)

Napkin: Virgin tissue

Packaging

Cutlery bag: Kraft unlaminated paper bag

Outer: Corrugated board

Field Of Application

The cutlery can be used safely with all types of food, serving cold or hot up to 70°C.

The cutlery is not suitable to be used in a microwave oven.

Different kinds of food can have an impact on the physical behaviour of the wood. Duni's recommendation is for the customer to test their application for their needs.

EC Directive 94/62/EC on Packaging and Packaging Waste

The packaging complies with all essential requirements as defined by 94/62/EC.

For example minimum adequate amount of packaging, limitation of heavy metal content, recyclable through at least one of the following: reuse, material recovery, energy recovery or composting.

Environmental Aspects

Birch wood, which is a renewable source.

The napkin in the cutlery pack it is made from virgin pulp.

PFAS (per- and polyfluoroalkyl substances) are not being used in any step of the manufacturing of the cups or bowls.

Packaging

Polyethylene is a polymer produced from refining of mineral oil or natural gas. The polymer consists simply of carbon and hydrogen.

The corrugated board box is made from wood, which is a renewable resource.

Product Safety

The products fulfil the following:

- EU Regulation 1935/2004/EC
- EU Regulation 2023/2006/EC
- Analysis has been performed according to LFGB (Lebensmittel- und Futtermittelgesetzbuch, Germany Regulation).
- Duni manufacturing units are certified according to the international quality system ISO 9001. They have also implemented the environmental management system ISO 14001.

Management of Used Products

Recycling

Although natural materials, the wooden cutlery will not break down in time to be compostable or thrown with food waste. And there is normally no wood collection system for recycling. For further details, check with the local recycling company.

Recycling of the plastic and the corrugated board is possible for producing new products.

Energy Recovery

All the materials are suited for energy recovery. Complete combustion gives mainly rise to carbon dioxide and water. The energy content of plastics/paper is comparable to that of oil/ wood.

Validity

This is issued 2024-03-08. It is revised when there is a change in the manufacturing process, in the product or in legislation.
