

## ENVIRONMENTAL AND PRODUCT INFORMATION SHEET

### **Product**

Brick boxes made from paperboard with a PLA coating.

The boxes are optimized for excellent stackability and maximal shelf space. They are made from renewable FSC™-certified paperboard and a plant-based PLA bioplastic coating. The boxes come with paperboard lids or transparent lids made from 100% post-consumer recycled PET (RPET) with an antifog feature to prevent condensation. They can also be sealed with our Duniform® concept.

### **Material**

Cardboard with PLA-lamination

### **Packaging**

Inner: Polyethylene PE

Outer: Corrugated board box

### **Field of Application**

The boxes can be used for any long-term storage at room temperature or below, including when packaged under hot-fill conditions including heating up to 70°C for up to 2 hours.

The bowls and boxes can be used in a microwave oven, but make sure not to use higher power and longer time than the product keeps its strength and stability during use. Different microwave ovens can affect the material in different ways and cause spills and burns if precautions are not taken.

Different kinds of food can have an impact on the physical behaviour of the bagasse. Duni's recommendation is for the customer to test their application for their needs.

### **EC Directive 94/62/EC on Packaging and Packaging Waste**

The packaging complies with all essential requirements as defined by 94/62/EC.

For example, minimum adequate amount of packaging, limitation of heavy metal content, recyclable through at least one of the following: reuse, material recovery, energy recovery or composting.

### **Environmental Aspects**

#### **Product**

The boxes are manufactured from virgin pulp and PLA (polylactic acid).

The cardboard and PLA-coating origins from renewable sources.

In the manufacturing of the boxes PFAS (per- and polyfluoroalkyl substance) is **not** being used in any step.

**Packaging**

Polyethylene is a polymer produced from refining of mineral oil or natural gas. The polymer consists simply of carbon and hydrogen.

The corrugated board box is made from wood, which is a renewable resource.

**Product Safety**

The product fulfils the following:

- EU Regulation 1935/2004/EC, Material and products intended for contact with foodstuff.
- EU Regulation 2023/2006/EC, Good Manufacturing Practice.
- EU Regulation 10/2011/EC with amendments, Material and products of plastic produced for contact with food.
- Migration tests on the article material performed by an independent institute showed that under appropriate test conditions, overall and specific (when relevant) migration falls considerably below the limit given by regulation 10/2011. (For further details, see *Declaration of Compliance*).
- Duni manufacturing units are certified according to the international quality system ISO 9001. They have also implemented or will implement the environmental management system ISO 14001.

**Management of Used Products**Recycling

The product may be recycled with cardboard and paper materials. However, recycling depends on collection, sorting and general material acceptance. Always consult with a local waste handler for recycling recommendations.

Recycling of the plastic and the corrugated board is possible for producing new products.

Compostability

The product is compostable in industrial facilities and complies with EN standard 13432:2000 for packaging recoverable through composting and biodegradation. Industrial composting is dependent on local infrastructure, make sure you follow local recommendations.

Energy Recovery

All the materials are suited for energy recovery. Complete combustion gives mainly rise to carbon dioxide and water. The energy content of plastics/paper is comparable to that of oil/ wood.

**Validity**

This is issued 2024-01-04. It is revised when there is a change in the manufacturing process, in the product or in legislation.
