

ENVIRONMENTAL AND PRODUCT DATA SHEET

Product

Trays (transparent)

Raw Material

Polypropylene (PP)

Packaging

Inner: Polyethylene

Outer: Corrugated board

Field Of Application

The items can be used safely with all types of food under following conditions:

- Long term storage in chilled conditions
- Hotfill and warm keeping at 70°C for up to 4 hours
- Chilled food in microwave oven maximum 900 watt for 3 minutes
- Frozen food in microwave oven maximum 900 watt for 8 minutes

If used for warm applications, staining may occur on transparent products.

EC Directive 94/62/EC on Packaging and Packaging Waste

The packaging complies with all essential requirements as defined by 94/62/EC.

For example minimum adequate amount of packaging, limitation of heavy metal content, recyclable through at least one of the following: reuse, material recovery, energy recovery or composting.

Environmental Aspects**Product**

Polypropylene is produced by refining of mineral oil or natural gas. The polymer simply consists of carbon and hydrogen.

Packaging

Polyethylene is made by refining of mineral oil or natural gas. The polymer consists simply of carbon and hydrogen.

The corrugated board box is to a large extent made of recycled fibers. The printing ink is water-based.

Product Safety

The product fulfils the following:

- EU Regulation 1935/2004/EC, Material and products intended for contact with foodstuff.
- EU Regulation 2023/2006/EC, Good Manufacturing Practice.
- EU Regulation 10/2011/EC with amendments, Material and products of plastic produced for contact with foodstuff.

Migration tests on the article material performed by an independent institute showed that under appropriate test conditions, overall and specific (when relevant) migration falls

DUNI GROUP

considerably below the limit given by regulation 10/2011. For further details, see Declaration of Compliance.

- Duni manufacturing units are certified according to the international quality system ISO 9001 and environmental system ISO 14001 as well as to BRC for hygiene.

End of Life

Recycling

Collection, sorting and material recovery are all part of the recycling process. Recycling is dependent on local waste handling infrastructure. Ease and recyclability of a product depends on the type of material, composition and sometimes colour. Check with local waste handling to get the correct information.

Energy Recovery

Incineration of mixed waste for energy recovery is a good end-use of products. Paper and plastic may burn well with low emissions.

Incineration facilities for energy recovery are dependent on local infrastructure. Incineration for energy recovery is a good alternative when material recovery is not available by recycling.

Validity

This is issued 2024-05-16. It is revised when there is a change in the manufacturing process, in the product or in legislation.
