

## ENVIRONMENTAL AND PRODUCT SAFETY DATA SHEET

**Product**

Dental sticks wood

**Material**

Dental stick: Birch wood

Single piece wrapping: Cellophane

**Packaging**

Inner: Cellophane and cardboard

Outer: Corrugated cardboard

**Field Of Application**

For oral hygiene.

**EC Directive 94/62/EC on Packaging and Packaging Waste**

The packaging complies with all essential requirements as defined by 94/62/EC.

For example minimum adequate amount of packaging, limitation of heavy metal content, recyclable through at least one of the following: reuse, material recovery, energy recovery or composting.

**Environmental Aspects****Product**

The dental sticks are manufactured from virgin FSC certified birch wood.

The wood origins from trees that have been growing on the "Swedish highland" with no further treatment.

**Packaging**

Cellophane is derived from natural sources such as wood. The cellophane wrapping is heat sealed without glue or chemicals.

The corrugated board box is to a large extent made of recycled fibres.

**Certificates & Labelling**

The product is FSC® certified (Forest Stewardship Council). FSC is an independent organization to promote responsible forestry.

### ***Product Safety***

The products fulfill the following:

- EU Regulation 1935/2004/EC
- EU Regulation 2023/2006/EC
- The wood is analyzed in accordance with French Note d'information no. 2012-93 for specific migration of formaldehyde and content of PCP.
- Duni manufacturing units are certified according to the international quality system ISO 9001. They have also implemented or will implement the environmental management system ISO 14001.

### ***Management Of Used Products***

#### ***Recycling***

Collection, sorting and material recovery are all part of the recycling process.

Recycling of the plastic and the corrugated board is possible for producing new products. Currently there are no good recycling streams for wood and how cellophane is managed by recycling companies varies in different countries. As recycling is dependent on local waste handling infrastructure make sure to check with the local recycling company.

#### ***Energy Recovery***

Incineration of mixed waste for energy recovery is a good end-use of products. Wood, paper and plastic may burn well with low emissions.

Incineration facilities for energy recovery are dependent on local infrastructure. Incineration for energy recovery is a good alternative when material recovery is not available by recycling.

#### ***Validity***

This is a copy of a document issued 2021-06-18. It is normally updated every second year or when there is a change in the manufacturing process, in the product or in legislation. To make sure that you have the latest edition, contact Duni Group.
